

Combinatorics Feb23

What is a group?

One operation * or +
Identity and inverses
Associative: $(ab)c = a(bc)$

$$\mathbb{Z}_2: \begin{array}{c|cc} + & 0 & 1 \\ \hline 0 & 0 & 1 \\ 1 & 1 & 0 \end{array} \approx \begin{array}{c|ccc} + & \text{even} & \text{odd} & \text{odd} \\ \hline \text{even} & \text{even} & \text{odd} & \text{odd} \\ \text{odd} & \text{odd} & \text{even} & \text{even} \end{array} \approx \begin{array}{c|cc} * & 1 & -1 \\ \hline 1 & 1 & -1 \\ -1 & -1 & 1 \end{array} \approx \begin{array}{c|cc} * & 1 & 2 \\ \hline 1 & 1 & 2 \\ 2 & 2 & 1 \end{array} \mod 3$$

$$\mathbb{Z}_3: \begin{array}{c|ccc} + & 0 & 1 & 2 \\ \hline 0 & 0 & 1 & 2 \\ 1 & 1 & 2 & 0 \\ 2 & 2 & 0 & 1 \end{array} \mod 3 \quad \mathbb{Z}_4: \begin{array}{c|cccc} + & 0 & 1 & 2 & 3 \\ \hline 0 & 0 & 1 & 2 & 3 \\ 1 & 1 & 2 & 3 & 0 \\ 2 & 2 & 3 & 0 & 1 \\ 3 & 3 & 0 & 1 & 2 \end{array} \mod 4 \quad \mathbb{Z}_5: \begin{array}{c|ccccc} * & 1 & 2 & 3 & 4 \\ \hline 1 & 1 & 2 & 3 & 4 \\ 2 & 2 & 4 & 1 & 3 \\ 3 & 3 & 1 & 4 & 2 \\ 4 & 4 & 3 & 2 & 1 \end{array} \mod 5 \quad \begin{array}{l} + \leftrightarrow 1 \\ 0 \leftrightarrow 1 \\ 1 \leftrightarrow 2 \\ 2 \leftrightarrow 3 \\ 3 \leftrightarrow 4 \end{array}$$

$$\mathbb{Z}_2 \times \mathbb{Z}_2: \begin{array}{c|ccccc} + & 0,0 & 0,1 & 1,0 & 1,1 \\ \hline 0,0 & 0,0 & 0,1 & 1,0 & 1,1 \\ 0,1 & 0,1 & 0,0 & 1,1 & 1,0 \\ 1,0 & 1,0 & 1,1 & 0,0 & 0,1 \\ 1,1 & 1,1 & 1,0 & 0,1 & 0,0 \end{array} \mod 2,2$$

$$\mathbb{Z}_5: \begin{array}{c|ccccc} + & 0 & 1 & 2 & 3 & 4 \\ \hline 0 & 0 & 1 & 2 & 3 & 4 \\ 1 & 1 & 2 & 3 & 4 & 0 \\ 2 & 2 & 3 & 4 & 0 & 1 \\ 3 & 3 & 4 & 0 & 1 & 2 \\ 4 & 4 & 0 & 1 & 2 & 3 \end{array}$$

$$\mathbb{Z}_6: \begin{array}{c|cccccc} + & 0 & 1 & 2 & 3 & 4 & 5 \\ \hline 0 & 0 & 1 & 2 & 3 & 4 & 5 \\ 1 & 1 & 2 & 3 & 4 & 5 & 0 \\ 2 & 2 & 3 & 4 & 5 & 0 & 1 \\ 3 & 3 & 4 & 5 & 0 & 1 & 2 \\ 4 & 4 & 5 & 0 & 1 & 2 & 3 \\ 5 & 5 & 0 & 1 & 2 & 3 & 4 \end{array}$$

$$\mathbb{Z}_2 \times \mathbb{Z}_3:$$

$$\begin{array}{c|cccccc} + & 0,0 & 0,1 & 0,2 & 1,0 & 1,1 & 1,2 \\ \hline 0,0 & 0,0 & 0,1 & 0,2 & 1,0 & 1,1 & 1,2 \\ 0,1 & 0,1 & 0,2 & 0,0 & 1,1 & 1,2 & 1,0 \\ 0,2 & 0,2 & 0,0 & 0,1 & 1,2 & 1,0 & 1,1 \\ 1,0 & 1,0 & 1,1 & 1,2 & 0,0 & 0,1 & 0,2 \\ 1,1 & 1,1 & 1,2 & 1,0 & 0,1 & 0,2 & 0,0 \\ 1,2 & 1,2 & 1,0 & 1,1 & 0,2 & 0,0 & 0,1 \end{array}$$

$$\mod 2,3$$

Inverses \Leftrightarrow Each row is a permutation of the first row
Each col is a permutation of the first col

The symmetric group S_3 : Permutations of $\{1, 2, 3\}$
Symmetries of a triangle

How to multiply?

→
Pull tight

→
Watch test triangle

Identity

Inverses

S_3 multiplication tables

| | | | |
|---|--|---|--|
| * | | * | |
| | | | |

Not commutative

$$\begin{array}{cc} \text{Diagram 1} & = \\ \text{Diagram 2} & \end{array} \quad \begin{array}{cc} \text{Diagram 3} & = \\ \text{Diagram 4} & \end{array}$$

Counting problem: Mark k cells in a triangular grid
How many patterns, up to S_3 symmetry?

$k=2$

$k=3$

$$|P| = \frac{1}{|G|} \sum_{g \in G} |x_g|$$

.

$k=2$

$$\binom{6}{2}$$

0

$$\binom{2}{1} + \binom{2}{2}$$

$k=3$

$$\binom{6}{3}$$

$$\binom{2}{1}$$

$$\binom{2}{1} \binom{2}{1}$$

$$k=2: \quad \frac{1}{6} \left[\binom{6}{2} + 3 \left(\binom{2}{1} + \binom{2}{2} \right) \right] = \frac{1}{6} (15 + 3 \cdot 3) = 4 \quad \checkmark$$

$$k=3: \quad \frac{1}{6} \left[\binom{6}{3} + 2 \binom{2}{1} + 3 \binom{2}{1} \binom{2}{1} \right] = \frac{1}{6} (20 + 2 \cdot 2 + 3 \cdot 4) = 6 \quad \checkmark$$

Fixed points by orbit

$\sum_{g \in G} |x_g|$ counts all fixed points (g, x) where $gx = x$

IF we can understand why there are $|G|$ fixed points per orbit,

then we understand $|P| = \frac{1}{|G|} \sum_{g \in G} |x_g|$

Look closely at how G acts on a particular orbit

These subsets of G (cosets) are always in 1:1 correspondence with each other, so they divide G into equal sized subsets.

$$\left\{ \begin{array}{c} \triangle 1 \\ \triangle 4 \end{array} \right\} \left\{ \begin{array}{c} \triangle 2 \\ \triangle 5 \end{array} \right\} = \left\{ \begin{array}{c} \triangle 1 \\ \triangle 4 \end{array} \right\} \left\{ \begin{array}{c} \triangle 3 \\ \triangle 6 \end{array} \right\} = \left\{ \begin{array}{c} \triangle 2 \\ \triangle 5 \end{array} \right\} \left\{ \begin{array}{c} \triangle 3 \\ \triangle 6 \end{array} \right\}$$

$$\left\{ \begin{array}{c} \triangle 1 \\ \triangle 4 \end{array} \right\} \left\{ \begin{array}{c} \triangle 2 \\ \triangle 5 \end{array} \right\} = \left\{ \begin{array}{c} \triangle 1 \\ \triangle 4 \end{array} \right\} \left\{ \begin{array}{c} \triangle 3 \\ \triangle 6 \end{array} \right\} = \left\{ \begin{array}{c} \triangle 2 \\ \triangle 5 \end{array} \right\} \left\{ \begin{array}{c} \triangle 3 \\ \triangle 6 \end{array} \right\}$$

$$(\# \text{ Fixed points of } \text{○○○})(\text{size of orbit}) = |G|$$

Quotient³: mod out by "normal subgroup" $\{ \begin{array}{c} 1 \\ \rightarrow \\ \leftarrow \end{array}, \begin{array}{c} \rightarrow \\ \rightarrow \\ \leftarrow \end{array}, \begin{array}{c} \leftarrow \\ \leftarrow \\ \rightarrow \end{array} \}$

* 

\Rightarrow 

$\text{mod } 2$

$\{ \begin{array}{c} 1 \\ \rightarrow \\ \leftarrow \end{array}, \begin{array}{c} \rightarrow \\ \rightarrow \\ \leftarrow \end{array} \}$ is not normal

and we don't get a coherent table when we try to mod out.

* 

\Rightarrow 

Various entries are inconsistent

Expand on class questions:
Even-odd parity.

Walks alternate square colors

2

4

8

14

Walks between squares of the same color:
even # steps

3

7

7

13

Walks between squares of the opposite color:
odd # steps

We can checkerboard the graph of all triangle positions.
Flips all change checkerboard color

We can checkerboard the graph of all permutations of $\{1, \dots, n\}$
Even-odd: How many pairs are out of order?
Adjacent pair swaps change this count by 1

$$k \text{ colors} \quad |P| = \frac{1}{|G|} \sum_{g \in G} |x_g| = \frac{1}{6}(k^6 + 2k^2 + 3k^4)$$

$$k=2$$

$$|P| = \frac{1}{6}(k^6 + 2k^2 + 3k^4)$$

$$= \frac{1}{6}(64 + 2 \cdot 4 + 3 \cdot 16)$$

$$= 20$$

$$k=3 \quad |P| = \frac{1}{6}(k^6 + 2k^2 + 3k^4) = \frac{1}{6}(729 + 2 \cdot 9 + 3 \cdot 81) = 165$$

use 1 color: 3

use 2 colors: $\binom{3}{2} 18$ (from above)

$$\Rightarrow \text{use 3 colors: } 165 - 3 - \binom{3}{2} 18 = 108$$

Not easily checked
(This way lies madness)

Let S_3 act on the colors, for this $|X| = 108$

108

$$\frac{1}{6} \left(108 + 2 \cdot 3 + 3 \cdot 4 \right) = 21$$

18 1 2

6

More systematic way to get
21 ways to color 
using 3 interchangeable colors
up to triangle symmetries:

Let $G = S_3 \times S_3$, group of pairs of actions of form  acting on triangle and then color choices

$$|G| = |S_3||S_3| = 6 \cdot 6 = 36$$

| | | | | |
|-------|---|---|---|--|
| 15 | 1 |  |  | $3^6 - 3 \cdot 2^6 + 3 = 729 - 192 + 3 = 540$ |
| | 2 |  |  | none $\frac{1}{36}(540 + 4 \cdot 9 + 3 \cdot 36 + 9 \cdot 8) = 21$ |
| | 3 |  |  | none |
| | 2 |  | | none |
| 1 | 4 |  |  |  $3 \cdot 3 = 9$ |
| | 6 |  |  | none |
| 3 | 3 |  |  | 4 zones color using all 3 colors $3^4 - 3 \cdot 2^4 + 3 = 81 - 48 + 3 = 3$ |
| | 6 |  |  | none |
| 2 | 9 |  |  |  4  2  2  8 |
| <hr/> | |  |  |  4  2  2  8 |
| <hr/> | |  |  |  4  2  2  8 |

Can we use inclusion-exclusion instead of Burnside's lemma?
Need to consider poset of subgroups of S_3 . Möbius inversion.

k colors

$$|P| = \frac{1}{|G|} \sum_{g \in G} |x_g| = \frac{1}{6}(k^6 + 2k^2 + 3k^4)$$

| type of symmetry | at least exactly, divided by symmetries | $(k^6 \ k^4 \ k^2 \ k)/6$ |
|--|--|---|
| $\{ \begin{smallmatrix} 1 \\ 1 \end{smallmatrix} \}$ | | k^6 |
| $\{ \begin{smallmatrix} 1 \\ 1 \end{smallmatrix}, \begin{smallmatrix} 1 & 2 \\ 2 & 1 \end{smallmatrix} \}$ | | $\frac{1}{6}(k^6 - 3k^4 - k^2 + 3k)$ |
| $\{ \begin{smallmatrix} 1 \\ 1 \end{smallmatrix}, \begin{smallmatrix} 1 & 3 \\ 3 & 1 \end{smallmatrix} \}$ | | $\frac{1}{3}(k^4 - k)$ |
| $\{ \begin{smallmatrix} 1 \\ 1 \end{smallmatrix}, \begin{smallmatrix} 2 & 3 \\ 3 & 2 \end{smallmatrix} \}$ | | $\frac{1}{3}(k^4 - k)$ |
| $\{ \begin{smallmatrix} 1 \\ 1 \end{smallmatrix}, \begin{smallmatrix} 1 & 2 \\ 2 & 1 \end{smallmatrix}, \begin{smallmatrix} 1 & 3 \\ 3 & 1 \end{smallmatrix} \}$ | | $\frac{1}{2}(k^2 - k)$ |
| $\{ \begin{smallmatrix} 1 \\ 1 \end{smallmatrix}, \begin{smallmatrix} 1 & 2 \\ 2 & 1 \end{smallmatrix}, \begin{smallmatrix} 1 & 3 \\ 3 & 1 \end{smallmatrix}, \begin{smallmatrix} 2 & 3 \\ 3 & 2 \end{smallmatrix} \}$ | | k |
| | | $\frac{1}{6}(k^6 + 2k^2 + 3k^4) \quad \checkmark$ |

Better approach: Skip Möbius inversion to compute "exactly".

Rather, when a pattern has d versions, we want to count each one with weight $\frac{1}{d}$.
Work up the poset, adjusting weights based on count so far from below.

k colors

$$|P| = \frac{1}{|G|} \sum_{g \in G} |x_g| = \frac{1}{6}(k^6 + 2k^2 + 3k^4)$$

| type of symmetry | at least | desired weight | subtract below | net contribution |
|--|----------|----------------|----------------|--|
| $\{ \text{1} \}$ | | k^6 | $\frac{1}{6}$ | $\frac{1}{6} k^6$ |
| $\{ \text{1}, \text{4} \}$ | | k^4 | $\frac{1}{3}$ | $\frac{1}{6} k^4$ |
| $\{ \text{1}, \text{3} \}$ | | k^4 | $\frac{1}{3}$ | $\frac{1}{6} k^4$ |
| $\{ \text{1}, \text{5} \}$ | | k^4 | $\frac{1}{3}$ | $\frac{1}{6} k^4$ |
| $\{ \text{1}, \text{2}, \text{3} \}$ | | k^2 | $\frac{1}{2}$ | $\frac{1}{3} k^2$ |
| $\{ \text{1}, \text{2}, \text{3}, \text{4} \}$ | | k | 1 | 0 |
| $\{ \text{1}, \text{2}, \text{3}, \text{4}, \text{5} \}$ | | | | $\frac{1}{6}(k^6 + 2k^2 + 3k^4)$ <input checked="" type="checkbox"/> |

This can be easier than Burnside's lemma.

Placing k markers on an $n \times n$ board, up to symmetry.

$$G = \{ \text{1}, \text{2}, \text{3}, \text{4}, \text{5}, \text{6}, \text{7}, \text{8} \} \quad |G| = 8$$

$$k=n=2 \quad |X| = \binom{4}{2} = 6$$

2

$$k=2 \quad n=3 \quad |X| = \binom{9}{2} = 36$$

8

$$\frac{1}{8!} (6 + 2 + 2 \cdot 2 + 2 \cdot 2) = 2 \quad \checkmark$$

$$\frac{1}{8!} (36 + 4 + 2 \cdot 6 + 2 \cdot 6) = 8 \quad \checkmark$$

6 36
